

CBD Market Report — Genesis City NW

Quadrant

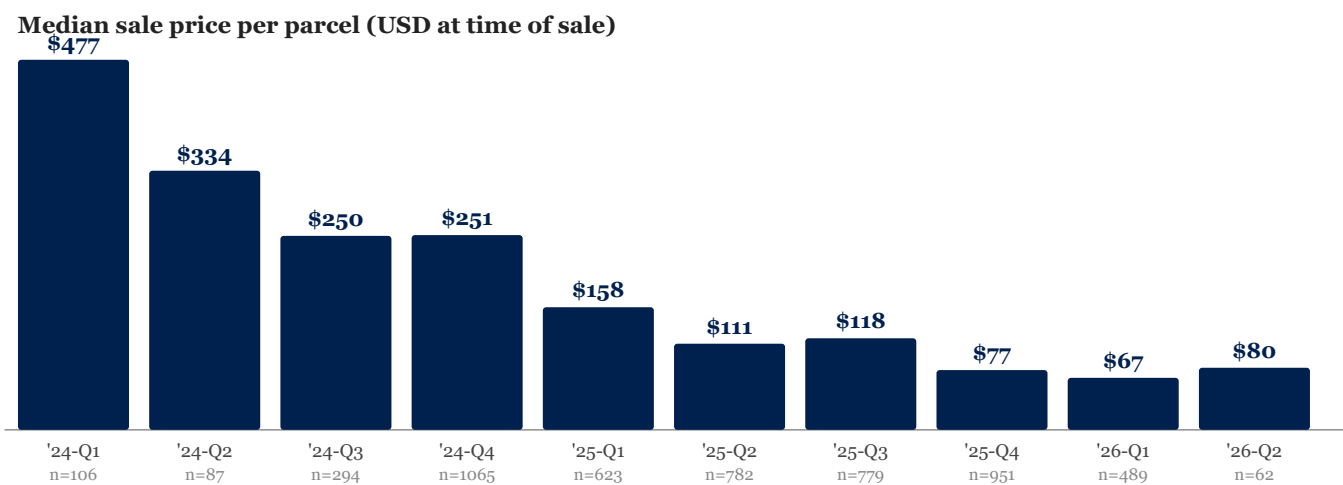

Generated 2026-07-03 · Coverage: all 6,776 parcels (X -150...-74, Y 63...150) · Sources: OpenSea activity, Ethereum L1 receipts, DCL Marketplace, EstateRegistry · Private — CBD community use

1. Fair Price

Fair zone: \$59–\$75 per parcel · median \$69 (624 sales in 2026, including 73 L1-recovered off-OpenSea deals).

Rules of thumb: below \$59 is a bargain; \$59–\$75 is fair; above ~\$97 (1.4×) is a premium demanding justification; above \$138 (2×) is 2024-era pricing. Offers are placed in ETH or MANA — use the converter on the heatmap for live rates.

2. The Liquidation Curve (quarterly)

Decentral Games' collapse put the entire district into liquidation. The median parcel fell **86% in USD terms** from 2024-Q1 (\$477) to 2026-Q1 (\$67). Volume peaked in 2024-Q4 (1065 sales) and has thinned to ~62 per quarter — the liquidation is largely done, and prices have flattened at the bottom with no meaningful dollar-terms recovery.

3. Wash Trading: the I_want_your_LAND Syndicate

Core wallets (identified via reciprocal-sale analysis and same-parcel round trips):

Wallet	Role	Evidence
0x55ab7ec3...14a8 "I_want_your_LAND"	Hub	241 buys / 251 sells; 78 same-parcel round trips return here; 30–100% flips within days
0xe86e494b...d245	Satellite	76 + 29 reciprocal sales with hub
0xceedac50...bee4	Satellite	35 + 13 reciprocal sales with hub
0xaba6c4ee...f15f	Satellite	17 + 7 reciprocal sales with hub

Suspected affiliates (monitored, not confirmed): JasonX/Bestie (0xbc02db03... — also a DAO whale with ~248,400 VP), Phergyson (0xa01424b7...), 0x90bd83c3..., and the 4-wallet NFTButler offer operation.

How the manipulation actually works — an honest accounting. Across all 671 syndicate seller-side sales (473 distinct parcels), the aggregate is **-5.5% vs quarter medians** (\$73,260 received vs \$77,528 at median) — i.e., their bulk business is *spread capture*: buy below median from the liquidator, resell at market in volume. The manipulation is *selective*: **267 sales (40%) closed above median, at an average +13% inflation** — including same-day round trips whose only purpose is printing a high "last sale" sticker on specific parcels. The danger is not their average price; it is trusting the displayed price of any parcel they touched.

All 671 syndicate sales, sorted worst-inflation first:

Parcel	Date	From (seller)	To (buyer)	Price	Quarter median	Inflation

4. Potential Good Deals (easily overlooked)

A. Low-cost-basis owners (offer targets). 74 individually-tradeable parcels last sold at or below the fair floor (\$59) since July 2025. Their owners are in profit at any fair-zone offer — the most likely sellers at a fair price:

Parcel	Last sale	Date	Owner (buyer at that sale)

B. Cheapest active listings (all listings remain above fair — bid, don't buy):

Location	Name	Ask	≈USD/parcel
6-parcel estate @ (-75,137)	"Last Vegas City"	8,410 MANA	\$100/parcel
(-86,86)	"Parcel"	1,986 MANA	\$142/parcel
(-142,135)	"Parcel"	2,000 MANA	\$143/parcel
(-112,116)	"Parcel"	2,000 MANA	\$143/parcel
(-104,104)	"Parcel"	3,000 MANA	\$214/parcel

C. Estate-building clusters. 55 contiguous free clusters exist (see `free_clusters.json`); the standout is the 55-parcel block at (−132...−125, 83...93) — an entire mergeable estate for roughly 3,795 USD at fair prices. Estates must be edge-contiguous, so contiguous pickups are worth more than scattered ones.

5. CBD Community Roster & Holdings

23 members · 38 registered wallets · 622 parcels held in the NW quadrant (individual + estate holdings attributed via the owner directory). The community acquired 358+ parcels for ≈\$46,163 through the liquidation — average \$129/parcel, with 2025–26 buyers averaging near fair. Only 17 of 358 purchases (4.7%) were made at ≥1.4× median.

Holdings count both individual parcels and parcels inside member-owned estates. Members with 0 may hold outside the region or under unregistered wallets.

6. The "Never Sold" Parcels (3,364 — 50% of the region)

Nearly half the quadrant has **no sale transaction on any venue, ever** — verified against OpenSea, the DCL Marketplace, and raw Ethereum receipts (which catch even off-market deals). Their history is: minted to Decentral Games' distribution wallet in 2018 → transferred into DG estates (the EstateRegistry contract) → at most shuffled between DG-controlled wallets during the liquidation, with no payment ever changing hands.

Why they exist: DG acquired the district wholesale at genesis and monetized it through its casino business, not resale — so no market history accumulated. The liquidation has only processed roughly half the inventory. **Implications:** (1) a never-sold parcel has no price anchor at all — its fair value is simply the zone in §1; (2) the large estate-locked portion among them (~3,263 parcels sit in estates) can only move as whole estates; (3) any never-sold parcel suddenly getting a first "sale" at a high price deserves immediate suspicion — there is no organic history to justify it.

Data of record: `opensea_activity_data.json`, `l1_hidden_sales.json`, `l1_estate_trades.json`, `region_estates.json`, `owners_directory.json`, `wash_analysis.json`, `inflated_lastsale_flags.json`, `dcl_listings.json`. Interactive map: `land-heatmap-sales.html`. Regenerate this report: `node generate-report.js`.
